

DIET CHANGE

Any change in diet must be done gradually. This is so your pet not only accepts the new taste but also his/her digestive system can learn to cope with it. (Gradual change reduces the risk of vomiting and diarrhoea.)

Our advice is as follows:

- Day 1 – feed $\frac{3}{4}$ of your old food and $\frac{1}{4}$ of the new food

If your pet is showing any signs of digestive upset please call for advice. This could mean the change over process has to be slowed even further.

- Day 2 - feed as for day 1

If all going well follow advice for day 3 through to 7. This means your pet is coping well with the change.

If your pet is showing any signs of digestive upset do not introduce increased amounts of the new diet until this has resolved first. This could mean feeding for day 1 for a longer period of time e.g. 4 days.

If your pet is not taking to new food well (fussy) continue as for day 1 until such time your pet accepts it. Your pet will adjust!

- Day 3 – feed $\frac{1}{2}$ old food and $\frac{1}{2}$ new food
- Day 4 - feed as for day 3
- Day 5 – feed $\frac{1}{4}$ old food and $\frac{3}{4}$ new food
- Day 6 – feed as for day 5
- Day 7 – feed only new food

**ANY FREE FOOD SAMPLES SHOULD BE FED AS ABOVE SO
AS NOT TO CAUSE DIGESTIVE UPSET.**
